Adrenocortex Stress Profile Extensive- Saliva (Test Code 1002)

Description

Analytes

Product Description

Each person has two adrenal glands both located on top of each of the body's two kidneys. These glands are important to the body's endocrine (hormonal) system. Adrenal fatigue is a very common condition in today's society through the physical and physiological demands we put on our adrenal glands. Each gland is composed of two distinct zones, the large outer cortex and the inner medulla.

The Adrenocortex stress profile extensive is an expansion of the Adrenocortex basic test in the sense that it includes SigA levels. Salivary cortisol testing is the most accurate and powerful non-invasive salivary hormone test that evaluates bioactive levels of the body's important stress hormones, cortisol and DHEA. This hormone test (stress test) serves as a critical tool for uncovering biochemical imbalances underlying anxiety, depression, chronic fatigue syndrome, obesity, dysglycemia, and a host of other clinical conditions that may affect our day to day lives. This hormone test examines 4 saliva samples over a 12-hour period for levels of cortisol DHEA and SigA. The Adrenocortex extensive test is a very useful tool for patients that have weak immune systems and susceptible to always catching the flu.

Common Conditions:

- Anxiety
- Headaches

- Poor concentration, 'brain fog'
- Energy levels
- Fatigue, lethargy
- Salt cravings
- Mild depression
- Lack of stamina
- Sexual dysfunction
- Irregular sleeping patterns
- Thyroid dysfunction
- Blood Pressure
- Depression
- Impaired Immune System

NOTICE TO PATIENTS

NutriPATH practices in the usual practitioner-referral system for pathology laboratories. Patients are **highly** recommended to seek the supervision and guidance of a qualified healthcare practitioner for the interpretation of any lab results and associated information.

NutriPATH can offer assistance in locating a suitable practitioner.
